
Database 1: Designing & Implementing a Database System by Nickolas Diaz

Company: AMTRAK®

Database Type: Transportation System Database using Oracle SQL

Overview of the Presentation

- short overview/users of Amtrak
- Entity Relationship (ER) model
- database business rules
- queries and their explanations e.g., insert and select
- references

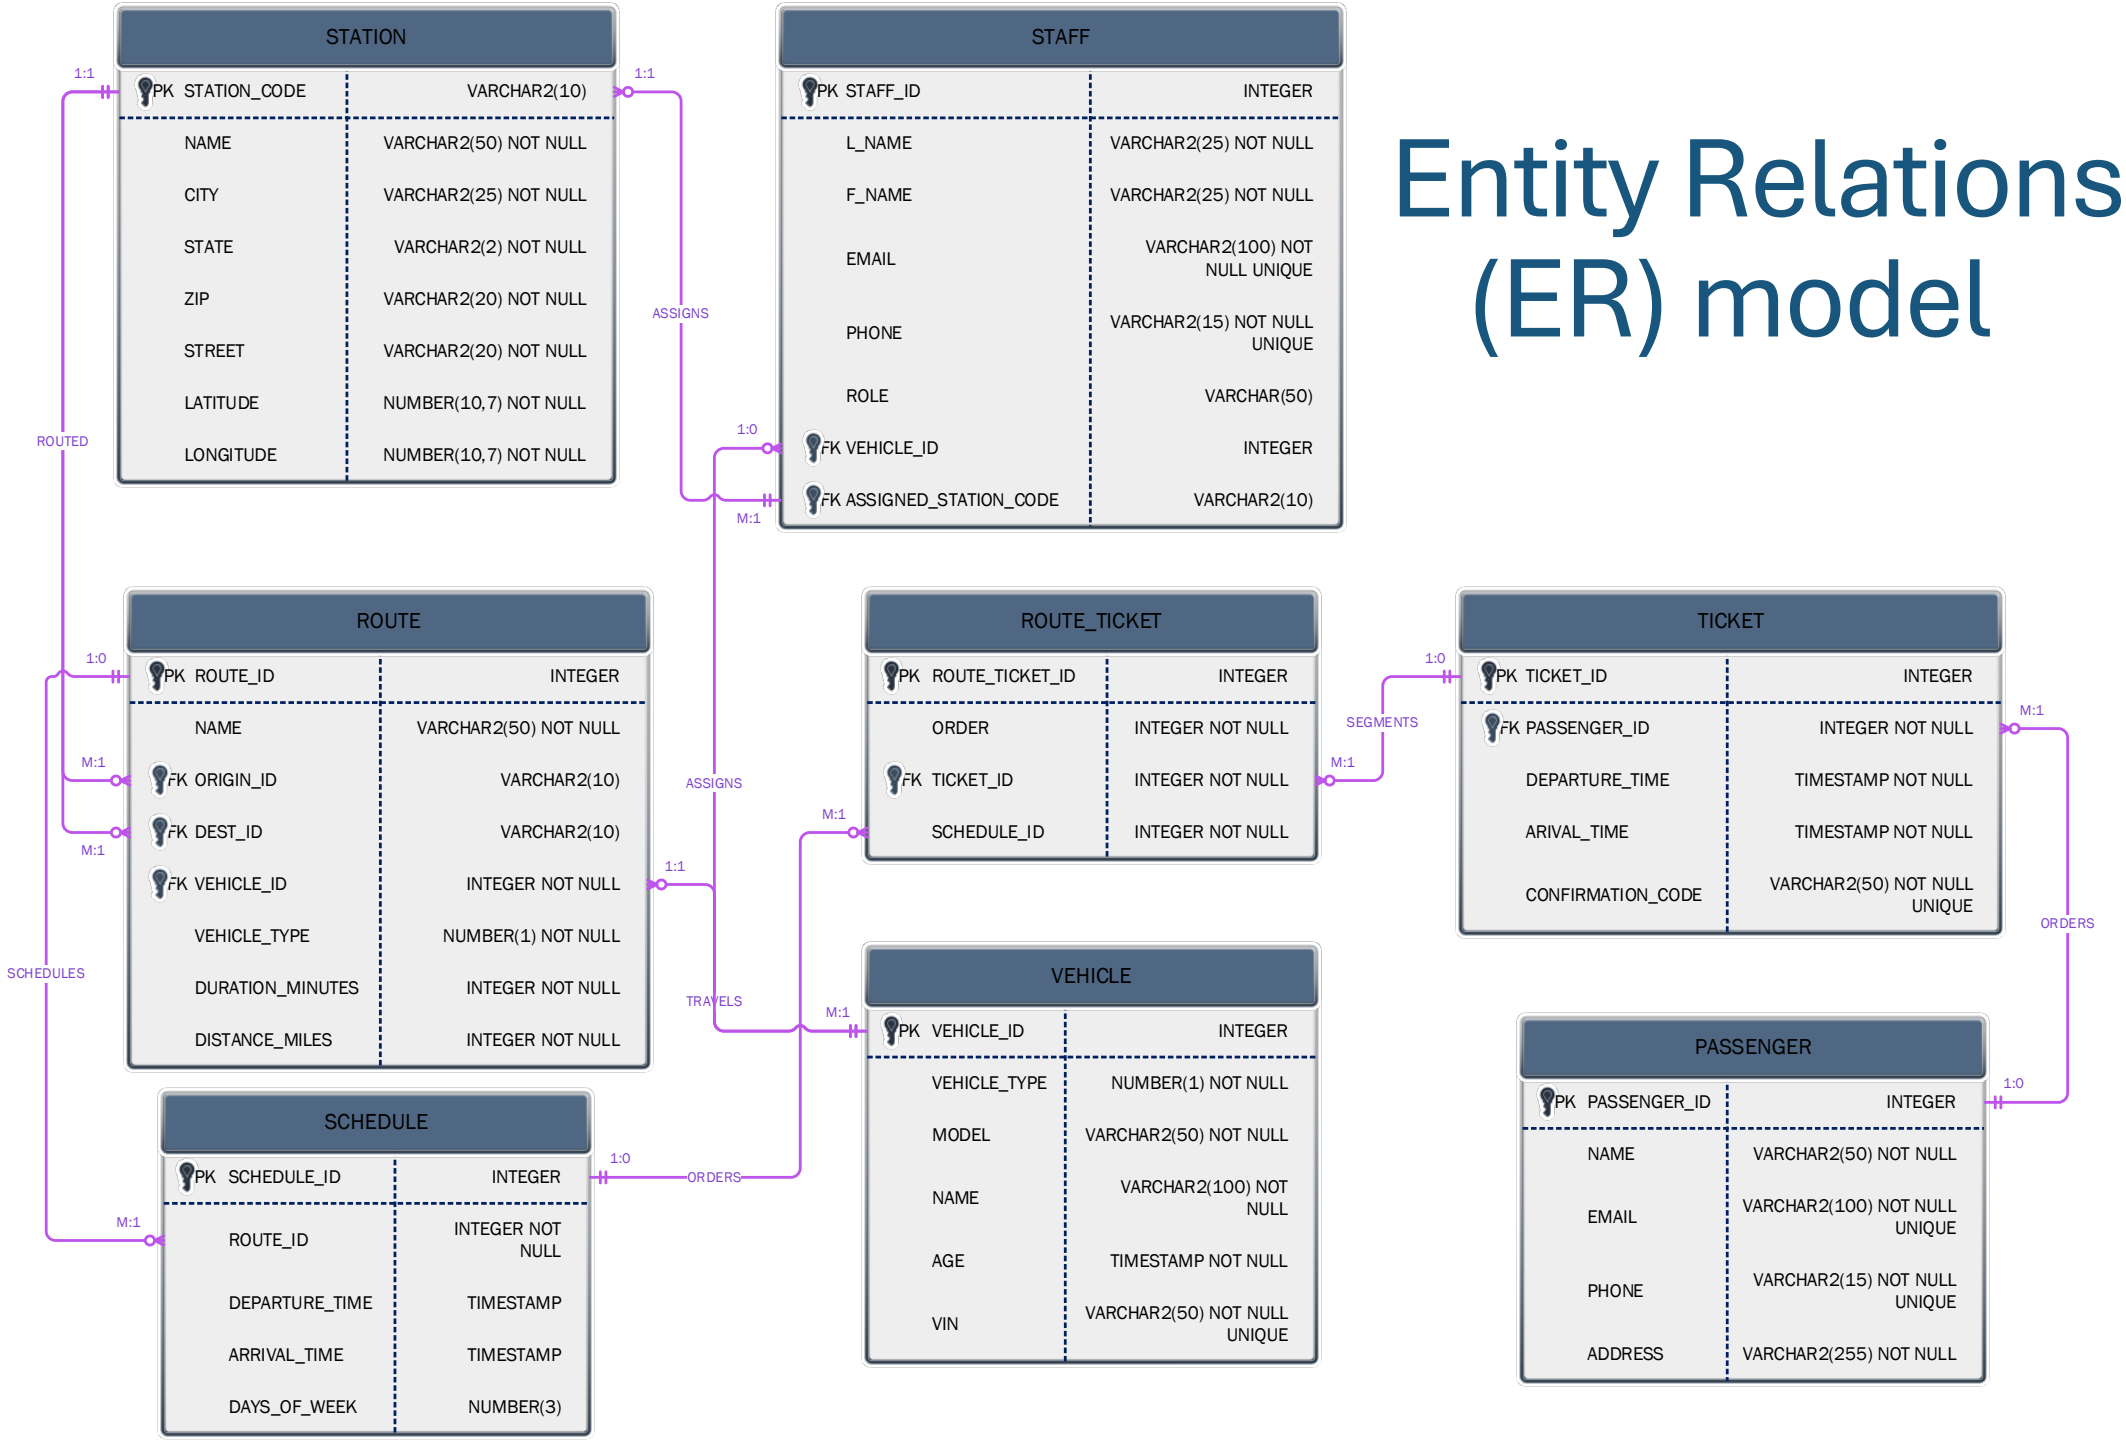
What is AMTRAK®

Amtrak is the United States' own national Railroad Passenger Corporation, providing a service of transportation for passengers. Founded in 1970 by Congress, it operates a network of over 24,000 miles of route in 46 states with over 500 stations. It's a federally chartered corporation, meaning it's owned by the government. but is structured and managed like a for-profit company. The company served 22.9 million passengers in fiscal year 2021, generating $2.1 billion in revenue and employing more than 17,100 people.

who will be accessing the system

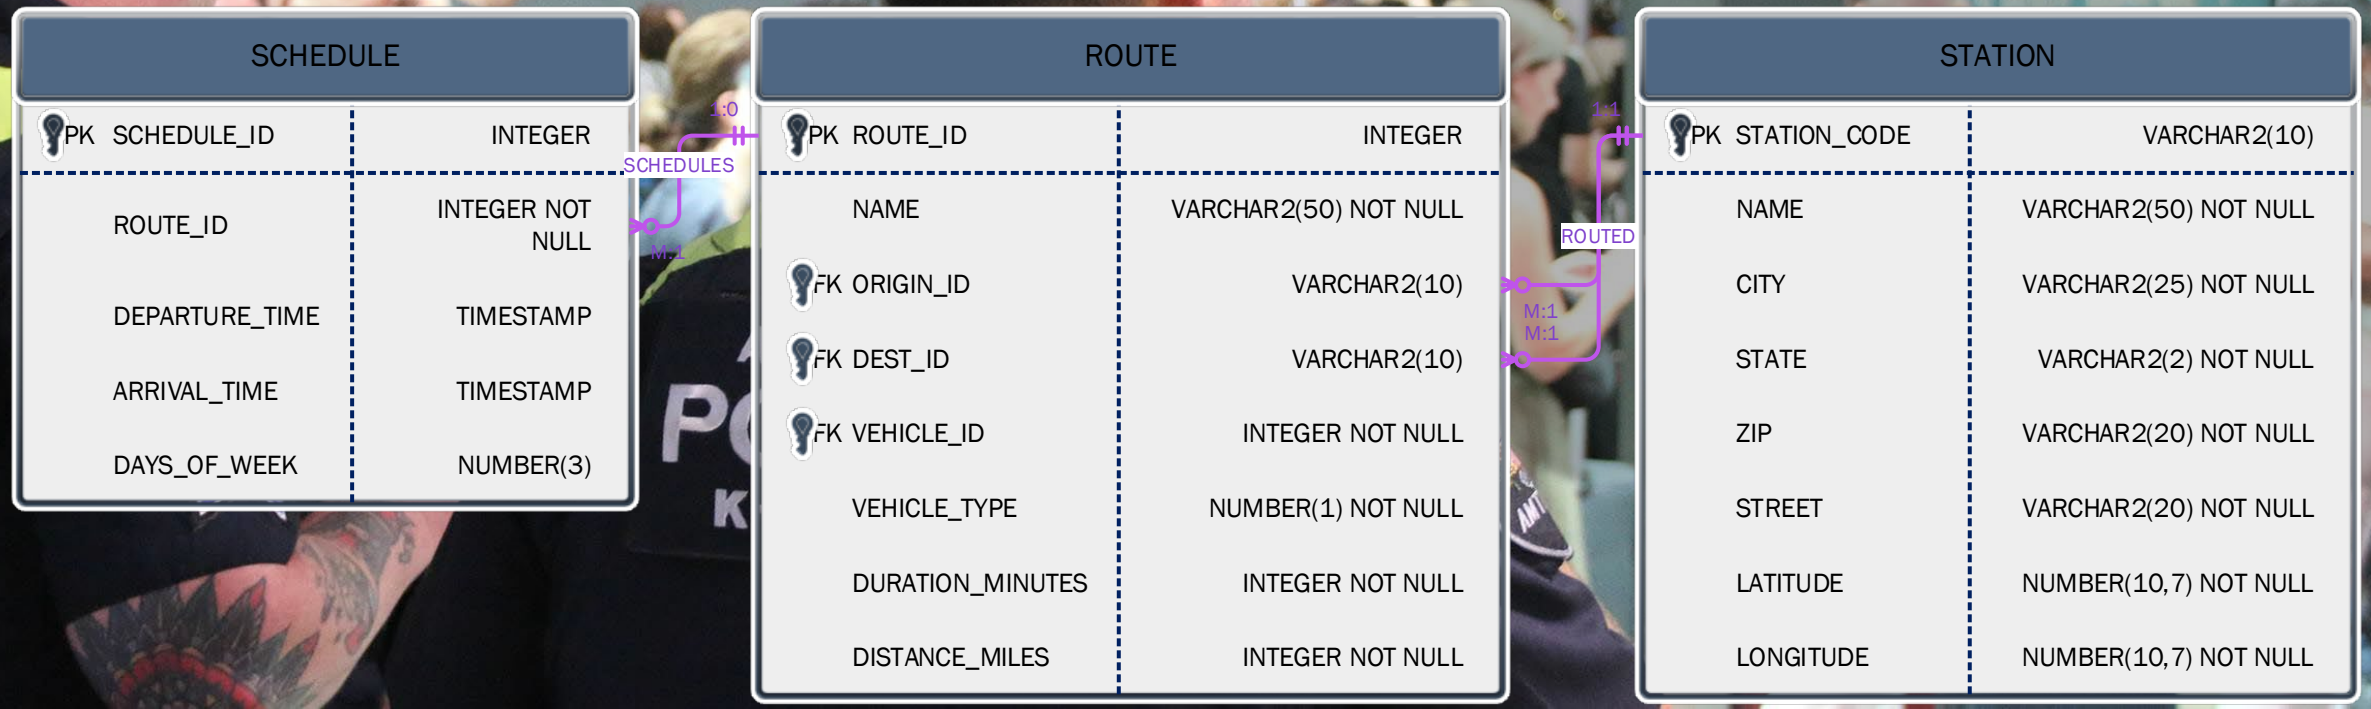
- Passengers for viewing routes, schedules, tickets, and stations
- Conductors and drivers for operating their vehicles and knowing their routes/schedules/stations
- Employees having their contact information role and assigned station

Entity Relationship (ER) model



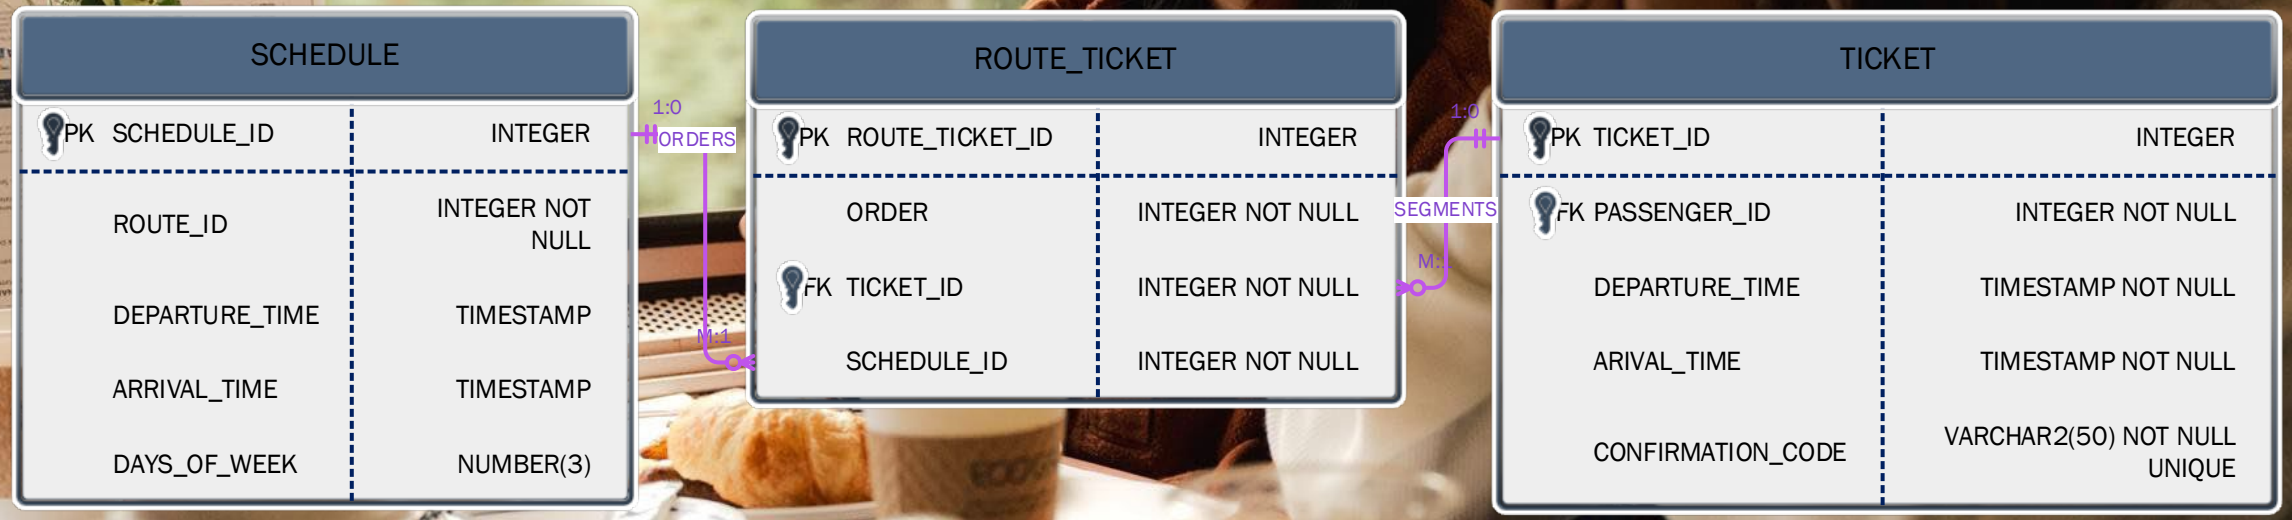
Station-Route-Schedule

Station e.g., Tampa Union Station
Route e.g., Tampa-Orlando
Schedule e.g., Tampa-Orlando every day at 8 am for the month of April
Station one to many routes
Route one to many schedules



Schedule-Route_Ticket-Ticket

Ticket e.g., one origin and one destination Tampa to Miami
Route_Ticket is meant to be a junction between the many to many tables
Route_Ticket e.g., order 1 Tampa to Orlando, order 2 Orlando to Miami



Business Rules Part 1

Station Rules

1. Each station must have a unique station code within 10 characters.
2. Station latitude/longitude must be valid within appropriate ranges.
3. Station Street, City, State, Zip must be valid formats
4. State must be two characters

Passenger Rules

1. All passengers must have a valid address, email and phone.
2. Passenger email addresses and phone numbers must be unique.

Ticket Rules

1. Tickets must be associated with a valid passenger.
2. Arrival time must be later than departure time.
3. Each ticket must have a unique confirmation code.
4. A ticket can be used for multiple routes through the ROUTE_TICKET table.

Business Rules Part 2

Staff Rules

1. Staff roles should be restricted to predefined categories such as (CONDUCTOR, DRIVER, CLERK).
2. All staff members must be assigned to a station.
3. All Conductors must be assigned to a Train and Drivers assigned to a Bus.
4. Staff email addresses and phone numbers must be unique across the system and consist of their last name + first name + staff id + @amtrak.com.

Vehicle Rules

1. Each vehicle must have a unique VIN.
2. Vehicle type must be either train (1) or bus (0).
3. The vehicle age is a timestamp of when it was acquired.

Route Rules

1. Origin and destination stations must be different.
2. Route duration and distance must be positive values.
3. Route duration is the typical amount of time to get to the destination.

Business Rules Part 3

Schedule Rules

1. Schedules must be associated with a valid route.
2. Departure time must be earlier than arrival time.
3. Days of week must use a valid bitmask value from 0 to 127.
4. Recurring schedules should not conflict with the same vehicle.

Route_Ticket Rules

1. Each route ticket must link a valid ticket to a valid schedule.
2. A passenger cannot be booked on overlapping schedules.
3. Order is used to track the order of routes needed to get to one station to another

Inserting Part 1

```
INSERT INTO PASSENGER (PASSENGER_ID, NAME,EMAIL, PHONE, ADDRESS) VALUES
